- Test engineering & Quality assurance
- Optical industry ● Model making
- Medical etc.

GUIDE ROLLERS

The xiros® polymer ball bearings are 50 % lower in price than the bearings previously used here

THERMOFORMING MACHINE

In this Thermoforming machine for coffee-cream portion packs, xiros plastic ball bearings are used for their highj chemical resistance. (frischli Milchwerke GmbH, Germany)

INDEXING TABLE

This indexing table is used to test metal balls for cracks and dimensional accuracy. xiros® polymer ball bearings are used here as wheels for the trolleys.

WET FILM THICKNESS GAGE

This precision tester for accurate and rapid measurement of all liquid paint, coatings, oil coatings and adhesives is equipped with a durable and solvent resistant xiros® B180 ball bearing.

FILM GUIDE ROLLERS

There is no contamination of the films through lubricants, due to the use of maintenance-free xiros® flange bearings.

STUTTGART ADLER

The use of a remote-controlled model aircraft is being tested and demonstrated as a remote sensing platform at the Institute of Space Systems (IRS). Due to the extreme weight requirements, the xiros® flange bearings are used here.

SMALL ROBOT

The wheels of this little low cost robot are two xiros B180 plastic ball bearings. These ensure an totally maintenance-free, lubricant-free and easy function.

xiros® Polymer Ball Bearings – for extreme applications

Lubrication- and maintenance-free

High corrosion resistance

For temperatures up to +150 °C

High chemical resistance can be cleaned

Non-magnetic

Low weight

xiros® Polymer Ball Bearings

xiros® polymer ball bearings revolutionize the market. Due to the maintenance-free dry-running and the use of xirodur® high performance polymers successfully solve many applications where conventional metal ball bearings are not effective.

Lubrication- and maintenance-free

High corrosion resistance

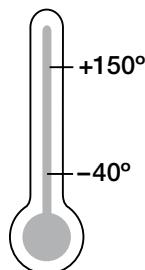

For temperatures up to +150 °C

High chemical resistance, can be cleaned

Non-magnetic

Light weight

Temperature

Product range

5 materials
10 product types

When to use xiros® polymer ball bearings?

- If you need lubrication-free ball bearings
- For maintenance-free dry-running
- At rotational speeds that exceed the limits of a plain bearing
- If corrosion resistance is required
- If temperatures are reached up to +150 °C (depending on type)
- If chemical resistance and cleaning is necessary
- If non-magnetics ball bearings are to be used
- Low weight requirement
- When they need for FDA compliance

When not to use xiros® polymer ball bearings?

- At very high loads or speeds
- Just for a cost down on traditional metal ball bearings
- At very high precision requirements (clearance)

Ball bearing

xiros® Polymer Ball Bearings

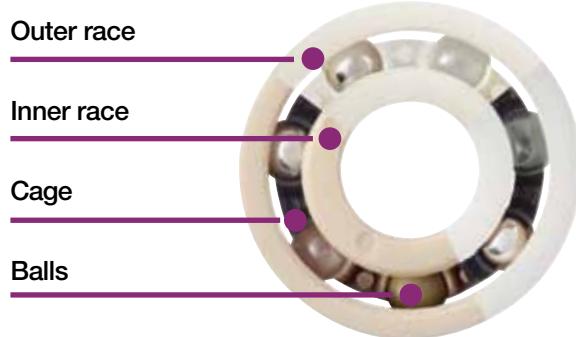

The product range of xiros® polymer ball bearing comprises a variety of different product groups. All have in common that they do not require any additional lubrication. This provides significant advantages in areas where lubricants can be washed out, or could decompose due to the operational environment. Other advantages are (depending on the design):

- Maintenance-free
- Light weight
- Free from metal (due to the use of glass and plastic balls)
- Non-magnetic
- Chemical resistant
- Corrosion resistant
- Electrically insulating
- FDA-compliant (► page 693)
- Predictable lifetime

This last point, the predictability of xiros® polymer ball bearing is one of the most important advantages. Based on the results of many wear tests, the user can calculate the lifetime of the xiros® polymer ball bearing reliably and interpret the application (xiros® expert ► page 687).

Design

The xiros® polymer ball bearings are single-row grooved ball bearings based on DIN 625. The lubricant-free and maintenance-free ball bearings consist of four components:

The Outer- and Inner Race

The suitability of a xiros® polymer ball bearing is largely determined by the materials of the two races. These are made from igus® tribopolymers to maximize service life and minimize friction. You can choose from five different materials. They allow different values of application

temperature, chemical resistance and price. The table with material data (► page 684) gives exact information.

The Cage

The material of the ball bearing cage must fit well to the application. These materials are very different regarding to chemical resistance and temperature. As part of the delivery program of xiros® polymer ball bearings the cage are already great with the materials of the outer and inner rings.

The Balls

The ball materials differ most significantly. In addition to steel, glass or plastics are used. This produces a large difference in mass, which in turn affects smoothness, weight and chemical resistance.

Steel balls (stainless steel) are cost-effective, chemical resistant, but with the highest weight.

Glass balls used to give a metal-free solution. They are also very resistant to chemicals and have an average weight. Polymer balls have significant advantages in weight, size and in the quiet running characteristics. Depending on the polymer plastic balls they can have excellent chemical resistance.

Pillow Block and Flange Bearings

This range is made up by combining xiros® polymer ball bearing with the igubal® pillow block and flange bearings, resulting in a higher flexibility in terms of installation of the bearings. The pre-finished bearing housing make it easy for the user to use these maintenance-free components. Both flanged and pillow block available as fixed or as a pivoting design.

The difference between the two options is that the pivoting type can compensate for shaft and/or bearing misalignment. A spherical outer race is pressed into the bearing housing, ensuring self aligning action.

xiros® Polymer Ball Bearings

Application Areas

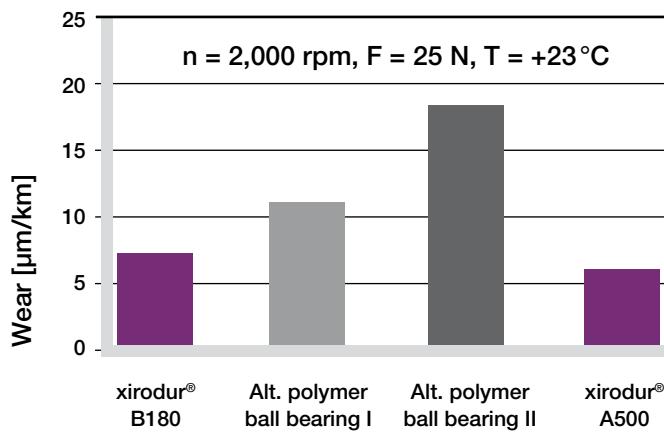

In contrast to metallic ball bearings, xiros® polymer ball bearings run without any lubrication. For this reason they are suitable for many applications which do not have extreme speeds or loads but ones which cannot use traditional greased ball bearings, as the application should run maintenance free. These areas are for example food and medical industries, packaging and textile industries, or the chemical industry and cleanroom applications as well as electronics and office technology.

Development and Tests

Through numerous tests the race materials were optimised. The polymers we have developed for use with ball bearings allow higher speeds, greater loads, and longer service life. But the development continues, we believe that polymer ball bearing technology will continue to advance, especially with our experience and development with tribological polymer materials.

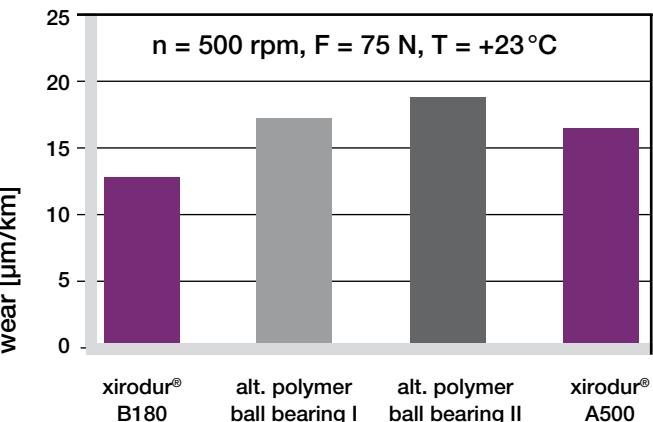

Challenge us, talk to us about your applications, tell us what you need from a plastic ball bearing.

In the igus® test laboratory the life and wear of xiros® polymer ball bearings was tested. In addition to the actual material comparison, tests indicate these experiments also answers to questions about the impact of external influences such as temperature, humidity or dust.

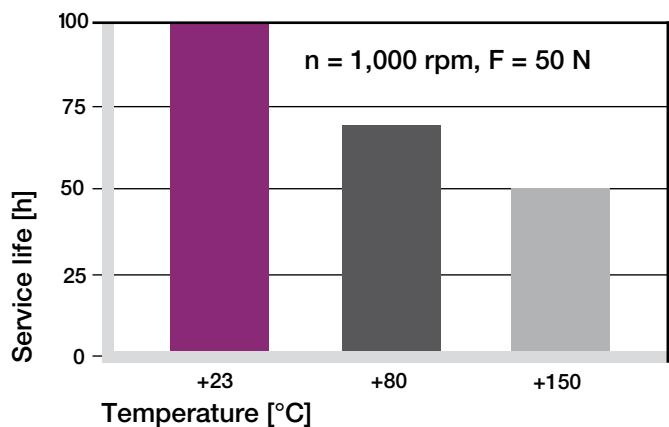

Graph 01: Wear test in igus® laboratory

The material combinations for bearing races, balls and cage are tested in the igus® test laboratory for a variety of load and speed. Thus, the application-specific selection of the suitable bearing and a Lifetime calculation is possible.

Graph 02: Wear test in igus® laboratory

Graph 03: Service life of xirodur® A500 polymer ball bearings at different ambient temperatures, dry

Predictability

As part of the development of xiros® polymer ball bearing tests are carried out continuously. The extreme number of test results make it very difficult to present this information in tabular form, and for it to actually make sense.

Picture 01: Test bench for xiros® polymer ball bearings at igus® laboratory

Picture 02: Test bench for xiros® polymer ball bearings at igus® laboratory

It is for this reason that igus has developed the online life calculator, which uses real test results to give an accurate calculation.

The lifetime-calculator is online at

► www.igus.eu/xiros-expert

Immediately after entering the data, the lifetime is calculated and displayed. It is important to remember that the result given is based on actual test results in the igus laboratory, and is therefore totally reliable.

Recommendation of tolerance for bore and shaft at xiros® radial ball bearings

By default we recommend a H7-tolerance of the housing bore of xiros® radial ball bearings and a h6-tolerance of the shaft. For further questions about the dimensioning of the bore and the shaft please contact us.

Cage material

70 = PEEK

Race material

A500 = xirodur® A500

Dimensions acc. to DIN 625-1

Ball bearing

xiros® polymer ball bearings open up new application areas for plastic roller bearings. After the 2007 market launch, the life-time of the high-temperature option with xirodur® A500 inner and outer rings could be clearly raised by up to factor 5.

- Lubrication- and maintenance-free
- For high temperatures up to +150 °C
- Corrosion-resistant

- Non-magnetic and washable
- Chemical resistant
- Low weight
- Inner-, outer races and cages made from FDA-compliant polymers
- Predictable lifetime
- For shaft diameter 3–20 mm
- Electrically insulating

PEEK cages, inner- and outer races
made from FDA-compliant polymers

xirodur® B180 Polymer Ball Transfer Unit | Product Range

xiros®
polymer
ball transfer
unit

BB-515-B180-POM

New! BB-522-B180-POM

Made of xirodur® B180
POM balls

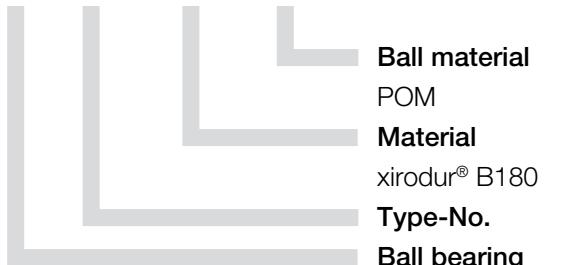

xiros® polymer ball transfer unit made of xirodur® B180 for the lubricant-free transport of sensitive product.

The support ball is mounted inside the housing on many smaller balls, in order to optimize the running behavior.

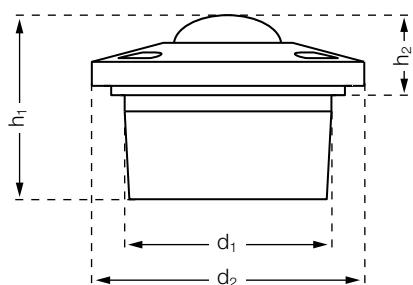

The entire structure of the polymer ball caster consists of plastic components.

Order key

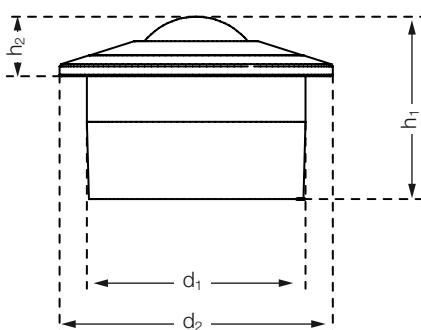

BB-515-B180-POM

- Lubrication- and maintenance-free
- Low coefficient of friction
- Corrosion-resistant and non-magnetic
- Temperature resistant up to +80 °C

xiros® pillow block bearings with glass or stainless steel balls are a combination of xiros® polymer ball bearings and igubal® housings.

- Low weight
- Totally corrosion-resistant
- Lubrication- and maintenance-free
- Washable and non-magnetic
- Service life prediction on request
- Compact design
- Electrically insulating

Ball bearing, single-row

4-holes flange bearing

xiros® flange bearings with glass or stainless steel balls are also a combination of xiros® polymer ball bearings and igubal® housings.

The new angle-compensating xiros® polymer ball bearing was developed for the maintenance-free application in conveyor belts, cam rollers and support housings. The light, corrosion-free and anti-magnetic bearing needs no oil or grease and compensates for misalignments caused by tiltings and/or tolerances.

- Compensation of misalignments
- Very low weight
- Totally corrosion-resistant
- Lubrication- and maintenance-free
- Washable and non-magnetic
- Service life prediction on request
- Compact design
- Electrically insulating

2-hole flange bearing

Made of xirodur® B180, RN56

and igumid G

PA cage

glass/stainless steel balls

+80 °C
-40 °C

In comparison to the four-hole flange bearing, the 2-hole design offers another possibility of adjustment due to the elongated holes. Alignment errors are compensated by the pivoting ball so that a tedious precise alignment of the bearings is usually not necessary.
